Accessibility

These checks highlight opportunities to improve the accessibility of your web app. Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so manual testing is also encouraged.

NAMES AND LABELS

- Buttons do not have an accessible name

These are opportunities to improve the semantics of the controls in your application. This may enhance the experience for users of assistive technology, like a screen reader.

NAVIGATION

- The page contains a heading, skip link, or landmark region

These are opportunities to improve keyboard navigation in your application.

TABLES AND LISTS

- `<th>` elements and elements with `[role="columnheader"/"rowheader"]` have data cells they describe.

These are opportunities to improve the experience of reading tabular or list data using assistive technology, like a screen reader.
